- **SpeechBehaviorApi**

```
    /**
     * when detected wakeword, call the function and the robot's eyes while show the
expression like squinting smile.
     */
    public static void notifyWakeup()

    /** after wakeword,call the function the robot's eyes will keep blinking,that means
listening user's speech
     * {@link SpeechBehaviorApi#notifyReceiveSpeakStart()},{@link
SpeechBehaviorApi#notifyReceiveSpeakEnd()},
     * {@link SpeechBehaviorApi#notifyReceiveNlpResult()} must be called in order
     * */
    public static void notifyReceiveSpeakStart()

    /** when detect speech end, call the function, the robot's eyes will roll left and
right,
     * that means waiting for answers from internet server.
     * {@link SpeechBehaviorApi#notifyReceiveSpeakStart()},{@link
SpeechBehaviorApi#notifyReceiveSpeakEnd()},
     * {@link SpeechBehaviorApi#notifyReceiveNlpResult()} must be called in order
     * */
    public static void notifyReceiveSpeakEnd()

    /** when receive nlp result from internet server or  some error happens, call the
function,
     * the robot's eyes will return to normal.
     * {@link SpeechBehaviorApi#notifyReceiveSpeakStart()},{@link
SpeechBehaviorApi#notifyReceiveSpeakEnd()},
     *      * {@link SpeechBehaviorApi#notifyReceiveNlpResult()} must be called in order
     * */
    public static void notifyReceiveNlpResult()

    /** when tts start,call the function,and robot's mouth led will turn on and breathe
     * */
    public static void notifyTTSStart()

    /**when tts end, call the function,and robot's mouth led will return to normal
     * */
    public static void notifyTTSEnd()
```

developers can read MicRecordActivity.java in demo for details。

- **TurnHeadApi**

```
/**
* @param wakeupAngle: DOA angel(The Direction of wake Words in microphone coordinate
system)
* @return The angle at which the head has rotated(targetAngel - sourceAngel)
*/
public static int shakeHead(int wakeupAngle, final MoveHeadCallback callback)

public interface MoveHeadCallback {
    void onSucc(int moveAngel,int currMotorAngel);
    void onError(int moveAngel,int currMotorAngel);
}
```
