Mini Phone Call API

Change Log

Version	Contributor	Date	Change Log
v1.0	龙仲春	19/07/10	init

overview

make a call , answer a call, hang up, listening the call status etc..

usage

```
//init api
PhoneCallApi.get().start(CallStateListener);

//make a call, the phonenumber is not required
PhoneCall.Contact contact = PhoneCall.Contact.newBuilder()
                .setName(name)
                .setPhoneNumber(phoneNumber).build();
PhoneCallApi.get().call(contact,IPhoneCallListener);

//answer
PhoneCallApi.get().answer();

//hang up
PhoneCallApi.get().hangup();

//play ring
PhoneCallApi.get().playRing()

//stop api
PhoneCallApi.get().stop();
```

CallStateListener

```
public interface CallStateListener {
   /**
    * when local contacts has changed , it will be invoke
    * @param names
    */
   void phoneBookUpdate(List<String> names);

   /**
    *  in the call
    * @param event
    */
   void callIncoming(CallComingUpEvent event);

   /**
    * the call will start
    * @param event
    */
   void callWillStart(CallWillStartEvent event);

   /**
    *  the call is finished
    * @param event
    */
```

```
    void callFinished(CallFinishedEvent event);

    /**
     *  the telephone ringing is interrupted by robot wakeup
     */
    void ringBreakByWakeup();

    /**
     * the telephone ringing is finished
     */
    void ringFinish();
}
```

IPhoneCallListener

```
public interface IPhoneCallListener {
    /**
     * call fail
     */
    void onFailue();
    /**
     * call success
     * @param contactList
     */
    void onSuccess(List<PhoneCall.Contact> contactList);

    /**
     * call by name , but not found the related phonenumber
     * @param contactList
     */
    void onContactNotFound(List<PhoneCall.Contact> contactList);

    /**
     * call by name , but found mutil related phonenumber
     * @param contactList
     */
    void onMultiNumberFound(List<PhoneCall.Contact> contactList);
}
```
